RBI INTRODUCES NEW LCD DOMINATOR™ SEALED COMBUSTION BOILER

WESTFIELD, Mass, June 2004 -- RBI combines sealed combustion technology and easy-to-service design with the LCD Series, the newest addition to the Dominator Series of domestic hot water heaters and hydronic heating boilers. LCD Series boilers use a sealed combustion chamber, special alloy burners and multi-speed blowers for more efficient staging. The sealed combustion chamber provides the flexibility of using outside air or mechanical room air for combustion.

The LCD Series is comprised of competitively priced, indoor/outdoor units that meet lox NOx requirements, while maintaining high performance and ease of serviceability. Twelve models are available within a wide 225 – 2300 MBH range.

The unit features a proven spark pilot ignition system that is safer and more reliable than conventional, hot surface ignition systems.

In addition to standard metal jackets, LCD Series boilers are also available with corrosion-resistant, brushed stainless steel jackets. The stainless steel jacket is ideal for outdoor or indoor installations in corrosive or harsh environments such as coastal areas and processing applications requiring wash down.

RBI, a Mestek Company, manufactures a full line of finned copper tube hot water heaters and boilers. For more information about the LCD Dominator Series boilers, contact Tim Markel, RBI, 260 North Elm Street, Westfield, MA 01085, Tel. **(413) 568-9571**, In Canada, **(905) 670-5888** or visit **www.rbiwaterheaters.com**.
